Generalised Bhaskar Rao designs with block size $k = 3$.

Diana Combe, The University of New South Wales, Sydney, Australia.

In this talk we define generalised Bhaskar Rao designs (GBRDs). We survey what is known for GBRDs with block size 3 - i.e. we explain the necessary conditions on the parameters, and give a brief general survey of those groups for which these necessary conditions are known to be sufficient. We give details for groups of size 16.

Keywords: Combinatorial design, Generalised Bhaskar Rao design, GBRD.
