

Fragile Power Domination II

Beth Bjorkman, Air Force Research Laboratory, Zachary Brennan, Iowa State University, Sean English, University of North Carolina Wilmington, Mary Flagg, University of St. Thomas, Johnathan Koch*, Applied Research Solutions, Amanda Verga, Trinity College

The power domination problem seeks to determine the minimum number of phasor measurement units (PMUs) needed to monitor an electric power network. We introduce random sensor failure before the power domination process occurs and call this the *fragile power domination process*. We explore results on this new parameter

Keywords: power domination, probabilistic graph theory
